**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 16 April 2003.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## **DETAILED ACTION**

This Office Action is in response to the request for reconsideration filed 16 April 2003.

### ***Claim Rejections - 35 USC § 112***

Claims 1-11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claims 1-11 disclose a memory element that has a non-programmed and programmed state, a first and second electrode interconnected in the non-programmed state, a bridge partly interrupted in the programmed state and a conductor track. A programmed and non-programmed state does not give definition of structure itself and needs to be fixed more of the structure state. The drawings include the memory element to have a spiraling or meandering shape but in the drawings it shows the conductor track has the spiraling or meandering shape.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

Art Unit: 2822

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

Claims 1-11, as far as understood, are rejected under 35 U.S.C. 102(e) as being anticipated by Chang et al. (U.S. Patent 6,59,842).

Chang discloses integrated circuit (Fig. 2) that contains a laminate substrate (10) comprising of a porous layer (18) and a covering layer (12) with a metal layer (14) formed thereon.

### ***Response to Arguments***

Applicant's arguments filed 16 April 2003 have been fully considered but they are not persuasive. As stated in the previous office action the applicant's response to the office action in regards to the 112 rejection did not answer all of the questions posed. In regards to the programmed state the applicant just added a limitation to show how the organic material is programmed or non-programmed but it is unclear how the bridge will be interrupted in a programmed state if the organic material is just heated how does a metal layer get interrupted. In addition the explanation that was given to explain the interruption of the bridge does not clear up the questions asked. In addition there was a question posed on whether or not the bridge and conductor track were two different things of the same thing in regards to the spiraling and meandering shape as described in the 112 rejection and the response states that they are separate but then states that the bridge is to function as the conductor track. Finally there was a question on what exactly the memory element was or comprised of and some of those questions were not

Art Unit: 2822

even answered. In regards to the Chang reference, the claims are rejected as far as understood.

### ***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
